OUTREACH NOTICE

Pringle Falls Experimental Forest
La Pine, Oregon

Forestry Technician (Research) Temp GS-0462-5 Spring/Summer 2020

The PNW Research Station is seeking to hire up to three exceptional employees as a temporary seasonal, full-time GS-0462-05 Forestry Technician. This position will be located at the Pringle Falls Experimental Forest, within the Deschutes National Forest near La Pine, Oregon. This position will serve as a member of a crew of up to 6 seasonal employees engaged in forest vegetation and downed wood monitoring projects in support of a 2,500-ac forest restoration experiment.

The Lookout Mountain Thinning and Fuels Reduction Study was established between 2011 and 2015 and is undergoing long-term ecological monitoring by a multi-disciplinary cadre of research scientists. This position is focused on the second post-treatment assessment of forest tree and understory vegetation composition, abundance and structure.

The incumbent:

- With training and project direction provided by Station Research Scientists, the incumbent serves under the day-to-day oversight of a GS-7 seasonal Crew Leader conducting field work; requiring the incumbent to work with a high degree of collaboration and coordination;
- Maintains situational safety awareness, conducts work using safe practices and is prepared to respond to emergencies if they arise;
- Has demonstrated knowledge and practical experience related to forest mensuration, vegetation and downed wood sampling; prior work experiences in forest inventory, and the identification of forest plant species common to central Oregon or the Pacific Northwest are strongly advantageous.

Principal activities will consist of applying existing measurement and assessment protocols to collect tree, downed wood and understory vegetation data across a network of permanent sample plots used to characterize vegetation dynamics associated with 5 different experimental restoration treatments in a mature ponderosa pine forest. Data will be collected using hand-held data loggers with the employees responsible for complying with data handling and management protocols to ensure data completeness, accuracy and security.

All activities will be conducted in a team environment based on values of interdependence, inclusivity and mutual respect. Day-to-day assignment and oversight will be provided by a GS-7 Crew Leader; overarching guidance and direction will be provided by an off-site Research Scientist.

The purpose of this Outreach Notice is to determine the potential applicant pool for this position. The actual position vacancy announcement is likely to be posted on USAJobs website (www.usajobs.gov) in the very near future (mid-to-late January, 2020).

Interested applicants must complete the attached form and return to Paul Anderson at

paul.anderson@usda.gov by January 15, 2020. Those desiring further information about the position may inquire via the email listed above.

About the Pringle Falls Experimental Forest:

Pringle Falls Experimental Forest is located about 10 miles east of La Pine, Oregon within the boundaries of the Deschutes National Forest. The forest is approximately 7,500 ac in size split among two units. The headquarters complex consists of historical buildings constructed by the Civilian Conservation Corps in the 1930's and sits adjacent to the Deschutes River. Seasonal crews and scientists are accommodated on site in residential units with kitchen and laundry facilities. Cell phone reception is good although there is no on-site Wi-Fi service available.

About the Pacific Northwest Research Station:

PNW Research Station is one of seven research units in the USDA Forest Service. The USDA Forest Service conducts the most extensive and productive program of integrated forestry research in the world. The scientific information produced by the Station has application on public, private, and tribal lands in the Pacific Northwest (Alaska, Oregon and Washington) and elsewhere in the United States and other parts of the world. The Station's programs reflect the changing character of the questions that science is being asked to help answer.

PNW Research Station has approximately 300 permanent and temporary employees in professional, administrative, research, technical, and clerical positions. There are six Program Managers that oversee program organizations, and nine laboratories which provide research. The laboratories are located in Oregon, Washington, and Alaska. Further information is available upon request.

*To be considered, applicants must be U.S. citizens.
Thank you for your interest in this position*
