

## **PhD Fellowships at SUNY ESF: Pathways to a Net Zero Carbon Future**

We are seeking exceptional doctoral students to join a new transdisciplinary initiative at SUNY ESF to address ‘wicked problems’ at the intersection of land use practices, energy systems, and climate change. The Pathways to a Net Zero Carbon Future project brings together three foundational areas of expertise at ESF – sustainable energy management, ecosystem stewardship, and climate-resilient design – at a time when practical solutions are urgently needed to decarbonize landscapes, build local resilience, and ensure just transitions. We are recruiting up to five highly capable, motivated, and creative PhD scholars that share a commitment to these goals and demonstrate potential as transdisciplinary researchers, practitioners, and team members. Successful applicants will receive two years of fellowship support and will then receive graduate assistantships to complete their degree programs. For more information on the Net Zero Carbon initiative, including how to apply, visit [www.pathwaysnetzerocarbon.org/apply](http://www.pathwaysnetzerocarbon.org/apply). Applications received by 01 February 2020 will receive optimal consideration.
