

The Navy has a forestry internship position available. We get applicants through the SCA (Student Conservation Association) which advertises the positions on their web site. Because of that we tend to get students or graduates with little or no forestry education or experience. I would like to change that by having this opportunity advertised more broadly. Thus on the OSU site. I have attached a .pdf of the SCA position announcement. And this is the weblink to the announcement.

<https://www.thesca.org/serve/position/forestry-natural-resources-technician-feb-8th-2021-start/po-00730413>

Individuals curious about this opportunity can contact me directly to ask questions at 360-434-2452

Preference is for an FM graduate or someone wanting to work for a while before completing their degree or going on to graduate school. The time period for the position is flexible for as long as we can fund it. We have had students for three months to two years and two that I know of have gone on to get a permanent position with the Navy in Natural Resources/Biology and fisheries. The individual would be working for SCA but directed by us. We currently have two Natural Resource graduates working for us and would like to add one more.

Thank you.
